

Carolina Software, Inc.

WasteWORKS-SQL Product Features:

- WasteWORKS-SQL provides the most powerful tools in the industry for ticketing, billing and reporting.
- Comes Standard with Microsoft SQL Server 2005 Express, a free server platform from Microsoft that can even be installed on a single workstation.
- Using the powerful Crystal Reports engine, WasteWORKS-SQL users can generate reports at lightning speeds.
- WasteWORKS-SQL Synchronization Manager keeps all site servers up to date, even when connections are less than reliable.
- Microsoft SQL Server 2005 Express provides the free SQL Server Management Studio, Windows security for data access, and additional tools, such as WasteWORKS report creation with MS Reporting Services.
- WasteWORKS-SQL is stable and reliable. It provides real-time calculation of balance and totals fields and provides quick look-ups and summaries.

WasteWORKS-SQL Provides Expanded Capabilities in a Familiar Look

WasteWORKS-SQL is available as a robust, off-the-shelf package for new customers and existing customers looking to expand on the proven capabilities of the industry's leading solid waste management software product.

WasteWORKS-SQL maintains the same flexible functionality and simple usability of prior offerings, but provides users and management with expanded reporting capabilities, Windows level security and fast, efficient processing in a wide range of network environments.

Microsoft SQL Server 2008 Express is bundled free with WasteWORKS-SQL and can be installed on a server or even a single workstation (please refer to hardware sheet for database and memory limitations for SQL Server Express). Customers may also choose to install WasteWORKS on a server running the full version of SQL Server 2005 or 2008. Microsoft SQL Server Express provides high level data security, simplified administrative tools and is fully compatible with other editions of SQL Server.

While WasteWORKS built-in management and financial reports are still available through the WasteWORKS-SQL Reports menu, reports generation duties have expanded to allow customers to take advantage of the powerful Crystal Reports engine, making reporting speeds soar and giving users the ability to edit copies of stock reports and create new, custom reports. Customers are provided with copies of all WasteWORKS stock reports in Crystal format! Support file reports and custom reports are available for editing in Crystal Reports, or they may be viewed in a simple viewer application. And WasteWORKS reporting doesn't stop there. Customers may also create reports using the powerful Microsoft Reporting Services tool, which is included with MS SQL Server.

The new WasteWORKS-SQL combines all of the benefits of a SQL Server platform with an easy to maintain, affordable, off-the-shelf solution for managing your facility.

The functional simplicity of WasteWORKS combined with the power of Microsoft SQL Server

WasteWORKS-SQL Synchronization Manager

The powerful new WasteWORKS-SQL Synchronization Manager helps keep site servers 'in sync', even when connections are less than reliable.

With regular updates between all sites, your users will always be on the

same page and downtime situations will be a thing of the past.

Each site maintains a complete copy of all the data, so if any site goes down all of the other sites can continue to operate. Data from other sites will

automatically synchronize when the connection is restored. The Sync Manager ensures that all sites are updated at regular intervals, and if your connection is disrupted, processing continues without interruption.
