WasteWORKS Customer Spotlight:

Volume 13 - Issue 3

July 2006

St Lucie County Solid Waste Baling and Recycling Facility

The St. Lucie County Solid Waste and Recycling Facility could be considered a model facility for solid waste disposal, but that would be an understatement. Boasting an award winning gas to energy system and a construction debris processing facility, this site prides itself on producing useful resources from its incoming waste and construction debris,

and sets the bar higher for solid waste facilities who strive to make the most of the ever-diminishing space available for landfills.

St. Lucie Facts:

- The first landfill cell was opened in 1978.
- This site processes 550 transactions per day, which equals about 2000 tons.
- St. Lucie County is one of the fastest growing counties in the country.
- The facility received the Best Engineering Award from the FICE in 2005-06 for their gas to energy program.

- To make the most of the available space, solid waste and non-recyclable materials destined for the landfill are processed and baled before being stacked in the active cell. Baling provides efficient use of landfill space and reduces the need for daily cover material used at conventional compaction sites.

Construction Debris Recycling:

Located on the east coast of Florida, St. Lucie County has been the victim of numerous hurricanes in the recent years, and like almost all of the other solid waste facilities in Florida, the county saw their landfill cells filling at astronomical rates from clean-up projects and construction and demolition materials. Combine this with the already enormous

amount of inbound C & D material created from the booming growth in the area, and it's obvious that conserving landfill space is a top priority. To keep this wave of construction and demolition debris from fattening their landfill, St. Lucie County turned to recycling ingenuity in an effort to divert reusable materials from the landfill. The county's onsite C & D processing facility recovers and recycles nearly 80% of the materials that would ordinarily end up in the landfill.

Making the most of methane:

MSW landfills produce methane gas and St. Lucie County's landfill is no exception. The surplus of methane gas generated by a landfill is often piped and fed to an area where it can be burned, and in some cases

Are you a WasteWORKS Power User? Are you interested in creating customized reports from your WasteWORKS data? For customers who want to add additional power to their WasteWORKS reporting tools, Crystal Reports is the perfect addition. Carolina Software technicians are available for on-site assistance with the installation of Crystal Reports. Call Carolina Software today for more information!

Become a WasteWORDS Focus Customer!

Tell us about your operations and you could be featured in the next WasteWORDS Customer Spotlight. We're inviting WasteWORKS customers to submit a short editorial about their site(s). This is your opportunity to tell us, and our hundreds of other customers around North America, why your site is special. Editorials should include information about your facilities (including facts and figures), your communities, special programs and

anything else that makes your site unique and interesting. We will review editorials and select one each quarter to be included in our WasteWORDS Customer Spotlight. Please e-mail your entries to info@wasteworks.com and include "WasteWORDS Entry" in your subject line. (Please limit entries to 500-600 words. Carolina Software staff will edit entries and contact you for final approval.)

WasteWORKS® for Container Billing

Make roll-off management easy with WasteWORKS, now for Container Billing. WasteWORKS now tracks containers so you know where you put it, who has it, & what day of the week you're going to pick it up. Call Carolina Software, Inc. for details: 910.799.6767 ext. 2.

this surplus can be used as fuel. But how many sites use their excess methane to make orange juice? Probably not many, but with a Tropicana plant as their neighbor, St. Lucie's methane serves a unique and useful purpose and provides fuel for Tropicana's boiling facilities.

A Scale House for the Future:

In the ongoing struggle to keep up with the expanding waste stream generated by the expanding populations, the county has recently completed a few updates at the scale facility. This face lift included the replacement of older scales and the addition of a new scale. In an effort to make the most efficient

The addition of WasteWIZARD has added speed and efficiency to this very busy scale house!.

use possible of this scale lane, WasteWIZARD automation has also been added to give the facility an express lane for redundant vehicles, while easing the burden on scale house staff. Its just one of the many examples of how St. Lucie County is using planning, ingenuity and technology to get ready for a very busy future!

Update:

Spotlight on Automation

Carolina Software, Inc., developer of the industry's leading solid waste management software, WasteWORKS, is now leading the way with the latest technology in scale lane automation! WasteWIZARD automation turns your scale lane into an express lane.

Waste WIZARD

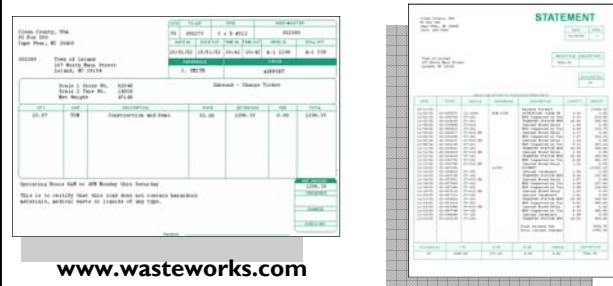

Scale lane automation for facilities using the WasteWORKS software package.

Ordering Forms

Ordering WasteWORKS tickets, statements and invoices from Carolina Software is as easy as ever. Just fax in your completed order form and we'll take care of the rest. If you don't have an order form, just call Carolina Software or visit our website to order on-line! We've updated our on-line order form to make online ordering easier than ever!

Did You Know?

Here are the answers to some common WasteWORKS questions.

Can WasteWORKS help me manage my roll-off container business?

- Yes, Carolina Software has just released WasteWORKS for Containers. This new version of WasteWORKS will combine the time tested functionality of our DOS-based CBS package (Container Billing System) with the industry-leading WasteWORKS software for solid waste management. The combination will be one complete and easy to use package for managing your facility and your roll-off containers! If you would like more information about WasteWORKS for Containers, please call 910-799-6767, ext. 2.

Can WasteWORKS handle different levels of pricing for my customers?

- Yes! The latest version of WasteWORKS v. 7 now provides users with the ability to set up to 5 levels of pricing for a particular material and each account can be set to one of the pricing levels. In addition to the existing contract and job pricing options, the addition pricing levels gives users even more flexibility for pricing.

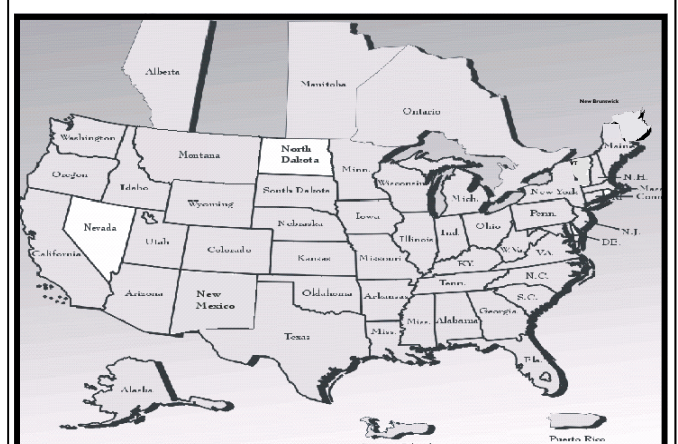

WasteWALKER Version 3:

The power of WasteWORKS in the palm of your hand!

NEW!

The new WasteWALKER Version 3 has been released and is now available for installation at your WasteWORKS facility. Just like WasteWORKS, WasteWALKER allows you to enter multiple line item, count-based, volume, and even weight-based materials into one compact and portable device. At the end of the day WasteWALKER tickets transfer easily into WasteWORKS where they can be closed out and posted. WasteWALKER now features an optional Bluetooth printer and comes standard with the latest Windows Mobile 2005 operating system. Call 910-799-6767 x. 2 or email info@wasteworks.com.

WasteWORKS States Update:

Since WasteWORKS was first introduced in 1987, the number of installed customers and geographic locations has increased dramatically. Locations in which facilities are using WasteWORKS include the areas shaded in gray.
